5 to A

OUTSIDE DRIVERS 5 variables
12 connections reach the core. Away from a tick: 1 to C, 1 to D and 1 to E.

4 to B

Twenty loop lines

Each loop is a line that comes back to where it starts.

This map draws the 20 numbered loops: 25 variables and 46 connections. The register lists all 51 variables and 118 connections.

Sketched loops, with no numbered chain and so no stations: B2, automatic benefits cushion economic shocks; B3, new competitors can limit market power; R9, taking part in a successful repair may support the next one.

2 to B

8 connections reach the core. Away from a tick: 1 to A.

TECHNOLOGY LAYER 8 variables

B Political inputs

Cross-cutting civic ties
B3
Turnout equality
B5
Hostile-content exposure
B6
R3
Affective polarization
R4b
Congressional capacity
D1
R13
Executive unilateralism
D2
B4
R11
Local news supply
B2
R16
Electoral pressure

A Economic structure

Household security
A4
R5
R15
R2
E1
Policy tilt to insiders
R18
Worker bargaining power
A2
R6
B1a
D4
Oversight and enforcement
Sanction applied
C5
B4
C3
Housing scarcity
A5
A6
R8
Owner home equity
B5
D6
State and local experimentation
Public service quality
D5
C2
Primary decisiveness
R10
R1
Wealth concentration
A1
B1
Money in politics
C1
C4
Incumbent control of election rules
Safe seats
R4a
R12
E2
R7
Warranted trust
Entrenched majority control
D7
D3
Doctrine favoring the appointing coalition
R1b

C Electoral competition

E Legitimacy

D Governing institutions

HOW TO READ IT

- Documented or well supported
- Plausible
- Contested
- Hypothesis
- + Both move the same way
- − They move opposite ways

Each tag points the way its step runs.

- A variable on one loop
- Shared by several loops
- Loop that feeds itself
- Loop that pushes back

Stations sit on an even grid. Distance and line length carry no meaning.

11 to A

ECONOMY LAYER 12 variables
15 connections reach the core. Away from a tick: 1 to E.
